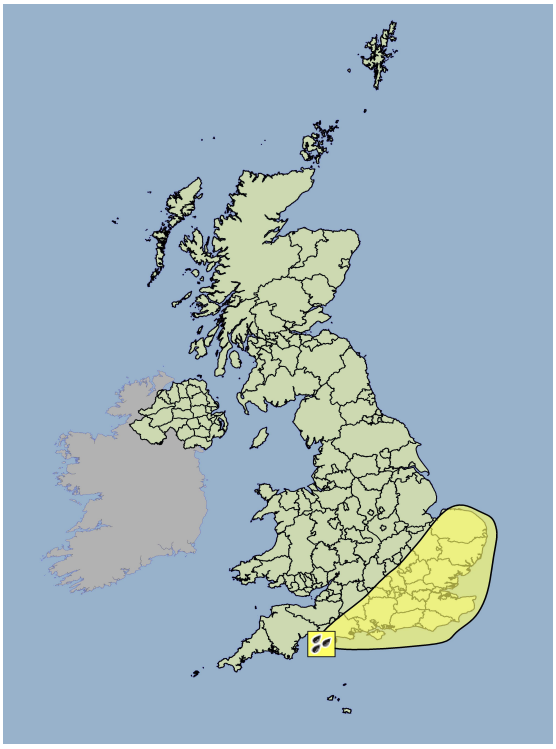
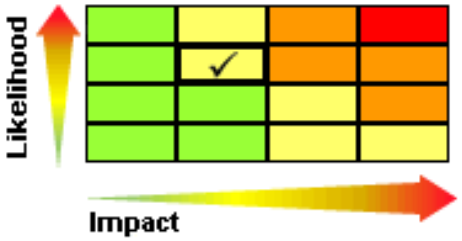
National Severe Weather Warning Service





Chief Forecasters Assessment
An active trough of low pressure will move eastwards across the southern half of the UK during Friday, bringing areas of heavy rain and also the risk of strong winds or gales to exposed coastal parts of Sussex and Kent during the early evening.

Despite the likelihood of some heavy rain across other central and southern parts of England at first, the main risk of localised surface water flooding is within the warning area, where 5-10 mm of rain is possible within an hour and locally 20-30 mm within 4 hours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Fri, 08th Nov 2013** until **23:00 on Fri, 08th Nov 2013**

Areas of heavy rain will move east across southeastern parts of England during Friday afternoon, clearing eastwards during the evening.

The public should be aware of the risk of localised disruption due to surface water flooding.
